

COVID-19 Financial Impact: Ambulatory Visits

Monitor the Financial Impact of COVID-19 on outpatient/ambulatory visits

Type: Analytics Accelerator

ID: 3593

Revised: 2020-Apr-29

Understand the financial, provider, and patient impact of COVID-19-related declines in ambulatory visits; prioritize ambulatory visits based on provider and patient safety, financial impact, and provider availability:

- Prioritize the outpatient visit backlog (strategic and financial importance, visit type, location, etc.)
- Gain visibility into outpatient visit trends by volume, revenue, department, visit type, and more to help plan recovery
- Track volume of telehealth visits relative to all visits to monitor shifts in delivery
- Use scenario planning to assess the impact of scheduling changes, payment assumptions, visit type mix, and more on providers and patients

The Ambulatory application helps healthcare systems recover from the provider and patient toll and the revenue loss of COVID-19 outpatient visit cancellations. At a glance, you can identify ambulatory care that will keep providers and patients safe and drive revenue. In-app tracking enables you to monitor your progress as your providers treat the backlog of patients and recover lost revenue.
