

HIE Interoperability: Community Orchestrate™

Engage community-wide care teams for attributed populations

Type: Software Application

ID: 3512

Revised: 2020-Jun-18

The **Community Orchestrate** application is a secure, scalable solution that reduces total cost of ownership by converging an interoperability solution with a world-class analytics platform, ultimately enabling a single, common, consistent layer of data that supports analytics, interoperability, and application development. Unlike EHRs, Community Orchestrate is built for cross-vendor interoperability, allowing for a true community-wide perspective across heterogeneous data sources.

Note: Interoperability products are Acquired Technology and are NOT included in the Technology Access subscription unless otherwise noted in an order form.

Intended Users

- Physician
- Hospital or physician assistant
- Nurses
- Care managers
- CTO
- CIO
- Population health leaders
- Clinician

Potential data sources

- EMR - Clinical
- HIE

Key measures

- Care gaps
- Risk stratification
- Quality measures
- Increased revenue
- Reduced cost
- Improved outcomes
- Data governance
- Patient safety

Success stories

For examples of how customers have used Health Catalyst products and services to improve outcomes, see our [success stories at healthcatalyst.com](https://www.healthcatalyst.com/success-stories)

Health Catalyst Community Connect

Patient data is organized and prepared for population health management.

Community Orchestrate includes target interoperability capabilities and professional services.

The problem

Clinicians struggle to find comprehensive, timely, meaningful data from across the community for use at the point of care. Furthermore, to make more informed decisions, clinicians need a broader set of clinical data to support analytic use cases such as quality measures, gaps in care, risk stratification, and population health.

Our approach

Community Orchestrate provides access to near real-time clinical data for improved point-of-care decision support. Unlike traditional approaches to interoperability though, Community Orchestrate is aligned with a world-class analytics platform to help enable better insights from the data.

Community Orchestrate is standards-based, industry-certified technology, trusted to power many geocentric health information exchanges nationwide. Additionally, it includes proven scalable solutions with tens of billions clinical transactions per year and thousands of connected hospitals, Community Orchestrate has a blueprint for successful implementations and offers customized advisory services to accelerate time-to-value and to drive adoption.

Benefits and features

- **Augments existing data assets** used for analytics with community-wide clinical data (beyond just the hospital sources).
- **Offers bi-directional data exchange** to increase trust and affinity with affiliated ambulatory providers.
- **Provides access to near real-time clinical data** for improved point-of-care decision support.

Use cases

- **A clinician** spends a significant amount of time trying to gather patient history. Without appropriate access, she is unable to establish an effective treatment plan. She uses Community Orchestrate to view a single longitudinal record from across the clinical community, helping her make the right decisions.
- **A nurse** can't access a patient's previous lab results, so he re-orders the same test again. With Community Orchestrate, he can see the recent results and avoids duplicate tests and unnecessary waste.
- **A director of population health** has no way of understanding and addressing high-risk conditions before they lead to costly treatment. With Community Orchestrate she can proactively identify high-risk patients and better manage the health of my patient population, while focusing on the needs of individual patients with the right interventions.
