

Health Catalyst Embedded: Care Gaps

Provide an unprecedented level of patient-visit care continuity

Type: Software Application

ID: 3921

Revised: 2021-Oct-21

The **Health Catalyst Embedded Care Gaps™ Application** is a fully EHR-embedded patient-visit solution combined with a world-class rules engine. Care Gaps increases revenue by ensuring necessary procedures are performed, decreases costs by streamlining visits, and improves the quality by improving adherence capacity. With Care Gaps, healthcare organizations can easily integrate into a system's EHR, organizations can close gaps in patient care, and maximize every patient's visit.

Note: Embedded Care Gaps is powered by the [Health Catalyst MeasureAble™ application](#). A quality measures solution that combines complete data, measures, visualizations, and workflows into one comprehensive system.

Health Catalyst Embedded Care Gaps provides seamless and actionable care gap information embedded directly into the EHR.

The problem

Experts estimate that gaps in patient care cost health systems millions of precious healthcare dollars and contribute to declining health for preventable conditions. COVID-19-induced delays to standard preventive care and routine screenings have only exacerbated gaps in patient care. Organizations are playing catch up to understand patients' current health status and cannot afford to waste limited resources on inefficient care processes and guesswork.

With an integration engine that delivers analytic insight directly into the EHR workflow, clinicians are empowered to close patient care gaps in real time and deliver, better, more cost-effective care.

Intended Users

- Medical director (CMO, CNO, practice manager)
- Quality leader (CQO)
- Population health leader

Potential data sources

- EMR - Clinical
- EHR
- Unlimited data sources

Key measures

- Care gaps

Success stories

For examples of how customers have used Health Catalyst products and services to improve outcomes, see our [success stories at healthcatalyst.com](#)

Our approach

Unlike traditional solutions, Care Gaps is a fully EHR-embedded patient-visit solution combined with a world-class rules engine to increase revenue, decrease costs, and improve quality across a broad spectrum of data and use cases.

Care Gaps provides seamless and actionable care gap information embedded directly into the EHR with regulatory measures. Additionally, it provides tailored information explicitly targeted to the clinician and patient that is easier-to-use and less costly than staffing EHR tool development.

Benefits and features

- **Seamless and actionable care gap information.** Care gap information is embedded directly into the EHR with regulatory measures.
- **The right insight, for the right person, at the right time.** A proactive and automated way to be notified to give the best care at the right time.
- **Easier and less costly.** Better user experience than EHR-based tools and less costly than staffing EHR tool development.
- **Saves time and reduces the physician's administrative workload.** Empowers them to do better care before, during, and after the patient visit.
- **Improved patient confidence in provider team.** The patient gets higher quality of care and appreciates a more efficient and well-planned visit.
- **Unlimited data sources.** Embed data from any DOS data source directly into the EHR.

Use cases

A population health leader is concerned with patient confidence within a specific department. Providers are unable to give the information patients need before, during, and after the visit. By incorporating Health Catalyst Embedded Care Gaps into the EHR, providers are now able to get the right insight, for the right person, at the right time. The proactive and automated notifications from the applications are tailored specifically to a patient which increases the provider confidence and decreases physician burnout.
