Service Description

The **Population Health Management (PHM) Solution Optimization Service** provides strategic guidance for the implementation and use of data and analytics to meet your organization’s value-based care needs. Working side-by-side with your clinical, operational, and financial stakeholders, our experts recommend sequence and pace for acquiring specific data and tools—and then individualize this infrastructure to optimally support your contractual requirements, stakeholder needs, and organizational priorities. The goal: to maximize the strategic value of your data and analytics for near-term and long-term success in population health management.

Visualization

With deep expertise across multiple value-based care categories, our Solution Optimization Service team partners with you to determine a strategy for leveraging data and analytics for value-based care and to individualize your tools to meet the needs of your organization.

Background

Population health management (PHM) requires robust analytic solutions that provide access to different and broader data sets, allow for enhancements that make data more actionable, and support diverse user needs. But analytic solutions by themselves don't guarantee success, and many organizations struggle to understand their data deeply and to develop a coordinated and strategic response to the information demands presented by PHM.

Service Overview

Understand your data deeply—and develop a strategic and tactical response to what the data is telling you

With deep experience and expertise across multiple domains, our team works side-by-side with your clinical, financial, and operational stakeholders to develop and implement an analytics strategy for success in population health management. The guidance afforded by the **Solution Optimization Service** helps you build a robust and flexible infrastructure that is tuned the requirements of your at-risk contracts, informed by a careful accounting of ROI, and aligned with the overall strategies of your organization.

Service Benefits and Components

- **Develop a clear strategy to meet today's challenges—and tomorrow's imperatives.** Our experts provide guidance about when to acquire specific data and technology, how to use them to increase care quality and lower total costs, and how to drive adoption of analytics to increasingly leverage data for better decisions. Our recommendations are informed by your current contracts, the needs of your patient populations—and by the answers you need to move forward in your journey to population health management.
- **Derive maximum value from your data and technology.** Our team helps ensure that your analytic investments are tuned to your specific value-based care arrangements and the realities of your organization. Working with you, we help determine the logic for provider attribution, develop algorithms for risk stratification, select data sources, etc.—key decisions that set the stage for timely, actionable insights.
- **Partner with experts in value-based care.** Our team has years of experience using data and analytics to help organizations achieve significant care improvement and cost savings within various value-based care models. With the Solution Optimization Service, you not only gain a partner committed to understanding and addressing your organization's current and future challenges, but you also benefit from our experience with other health systems facing similar challenges in population health management.

Service May Be of Interest to ...

- Client partners investing in technology to support a population health strategy
- Executive leadership
- VP of Population Health
- Clinical, financial, and operational stakeholders responsible for developing or executing population health initiatives
- Directors of information technology
- Population health operations leaders and teams
