

Data Governance Consulting

Managing your data as a strategic asset

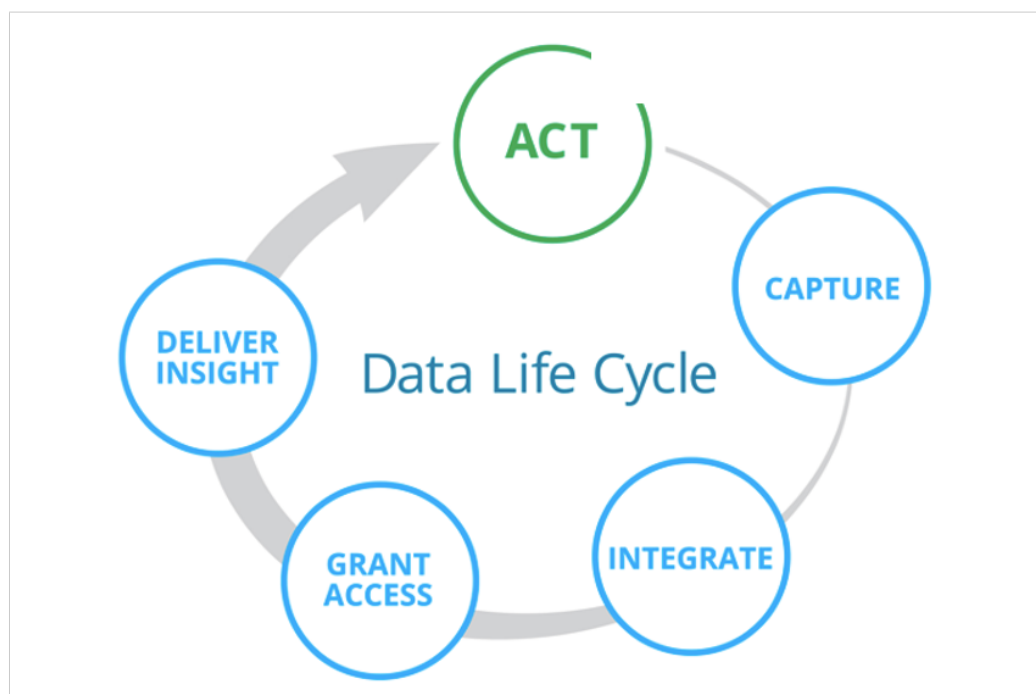

Type: Professional Service

ID: 1663

Revised: 2020-Dec-22

Health Catalyst's Data Governance Consulting is an expert-led engagement that facilitates the implementation of sound data-management structures and processes. With a flexible, principle-based approach, our consultants partner with you to create capable and engaged teams that build data quality, utilization, and literacy. The service delivers findings and an executive report with recommendations to guide the implementation of data governance tailored to your organization.

Intended Users

- Chief Information Officer
- Chief Executive Officer
- Chief Financial Officer
- Chief Operating Officer
- Chief Clinical and Nursing Officers
- Data analysts

Our team

Our team is a diverse group of professionals—clinicians, financial analysts, and analytics and operational experts—steeped in the realities of value-based care and committed to ensuring that our client partners succeed in changing healthcare for the better.

Success stories

For examples of how customers have used Health Catalyst products and services to improve outcomes, see our [success stories at healthcatalyst.com](https://www.healthcatalyst.com/success-stories)

The problem

Healthcare systems have a tremendous amount of data—clinical, financial, and operational data—but most organizations struggle to use it optimally for better decisions. Symptoms of this struggle abound:

- Inability to respond to new analytic use cases and requirements
- Poor or unknown data quality—or data that's siloed, inaccurate, inconsistent, non-standardized, etc.
- Lengthy and inaccurate decision cycles
- Inconsistent analytic results from different source attempting to answer the same questions
- Lack of accountability or processes for fixing data quality issues

Our approach

With decades of experience supporting data-informed transformation at some of the nation's most prominent healthcare organizations, our consultants follow a principle-based approach to data governance. Our stepwise framework helps target improvement opportunities and makes complex data-improvement work scalable and manageable. The ultimate goal? To help your organization establish the best-practice structures and processes that empower you to manage data as a strategic asset—and improve decisions from the boardroom to the bedside.

Benefits and features

- **An actionable and comprehensive framework.** With a focus on ensuring data quality, utilization, and literacy, our consultants can guide you through a sequence of activities to implement or refine effective data governance. Our approach aims to help your stewards and teams find and address issues wherever they occur in the data life cycle, from data capture and integration to analysis and decision support.
- **Discipline and flexibility.** Organizations can't—and shouldn't—put governance processes around all their data. We support governance where it matters most and can guide you in a rational prioritization process. Fundamentally we seek to recommend and help design structures and processes that serve your most important business activities.
- **Broad perspective with deep expertise.** Steeped in the experience of healthcare systems around the country, our consultants bring lessons and best practices to support governance that is grounded in your organization's current realities and aligned with your overall strategy and vision.
